

Matt perfection, lean processes

- high-quality matt and haptic surface
- excellent design options due to the direct application of decals
- lean process due to the elimination of the clearcoat layer
- processable via high rotation disc / omega loop

MATT DESIGN

Matt finish? In perfection. The INDUSTRIQ Topcoat W382 enables an attractive and haptic surface finish in matt - without any clearcoat. At the same time, the system scores with excellent and direct adhesion of decals. The interplay of high-gloss decals and matt surfaces creates new design options. Whether black or colorful - we will find the answer to your design request.

LEAN PROCESS, STRONG PROTECTION

Our matt system is optimized to produce durable and visually high-quality surfaces entirely without a clearcoat layer. At the same time, the liquid paint can be applied using the high-rotation disc and enables easy handling. The system initially developed for the automotive market is also highly resistant to external influences and impresses above all with its outstanding resistance to weathering: efficient but strong.

Black Magic

We create haptic and high-quality surfaces in black matt in a perfect interplay with high-gloss decors. A system that designers love and which is already in use at KTM today. Thanks to the specially developed Industriq Topcoat W382 125572, decals can be applied directly to the black matt topcoat without needing the protection of an additional clearcoat. This enables new design options in a lean process.
