

# Energy-efficient system for matt and robust surfaces

- matt low-temperature system
- very wide stoving window with high gloss and color stability
- very good abrasion resistance
- excellent optical properties

## ROBUST AND HIGH QUALITY FINISH

Industriq Powder Topcoat W818 combines excellent optical properties with high functionality and robustness. The matt system shows excellent resistance to scratches, abrasion and corrosion, even on smooth and dark surfaces. But the powder coating also offers its strength in application: extensive stoving window, excellent gloss and color stability. Industriq powder topcoat also withstands excessively high baking temperatures and gives color deviations no chance.

## DOUBLE EFFICIENCY

The low-temperature system with a wide curing window scores points in two respects when it comes to efficiency. Firstly, by reducing the curing temperature, the energy balance of painted components can be significantly reduced, thus also optimizing the carbon footprint. Secondly, process times can be shortened, and throughput increased if required.

### **Furniture Fittings**

INDUSTRIQ Powder Topcoat W818 is often used for frames, bars and back panels of drawer systems. Strong functional properties such as scratch, abrasion and corrosion resistance are essential for the interior. Especially with smooth and dark surfaces, these properties are often difficult to achieve. But the Wörwag coating fits and still convinces with excellent optical properties.
