

INDUSTRIQ Powder Clearcoats W845/W847

We give bicycles a perfect finish

- excellent color fastness of decals due to low baking temperatures
- excellent optical properties
- very good leveling even at low film thicknesses
- excellent weather resistance

PERFECT FINISH

Our INDUSTRIQ Acrylic Powder Clearcoat series give every bicycle a perfect finish: W845 for excellent high-gloss brilliance, W847 for the matte look. The advantage: due to low baking temperatures, especially heat-sensitive decals can be protected in the best possible way and the color fastness can be maintained at 100%. Yellowing and color deviation do not stand a chance. At the same time, the systems offer excellent flow. Even with low film thicknesses, the paint performs perfectly.

PROTECTION LIKE A SHELL

INDUSTRIQ Acrylic Powder Clearcoats not only shine with excellent optical properties but are also as strong as a shell - and that for a lifetime. They offer protection against stones, rain, hail and sun. An excellent finish for every challenge and stage.

We set the scene for decals

Decals are an essential part of bicycle design. However, ink-based decals are very sensitive to heat. Excessive curing temperatures cause yellowing and color deviations. INDUSTRIQ Powder Clearcoats W845 and W847 impress with low baking temperatures and excellent optical properties in dull matt or high gloss. Decals are thus optimally protected and perfectly set in scene.
